# PROJECTS

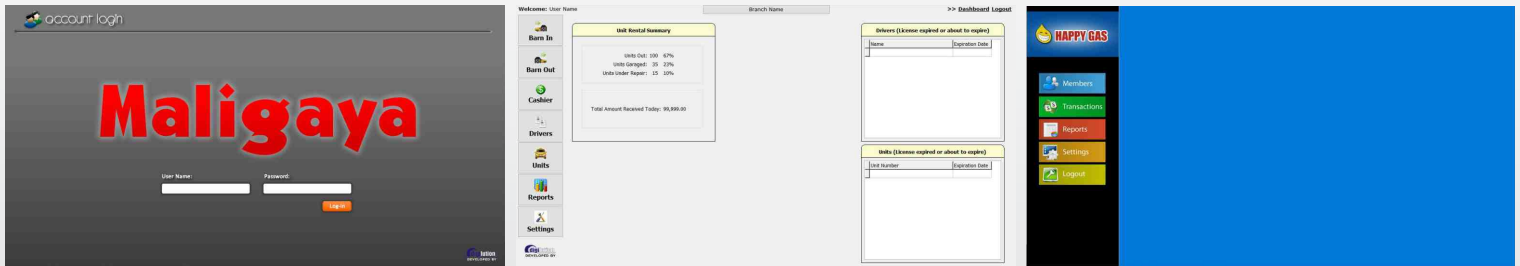

## Job Order System

This project aims to have a system that will provide an allocation of costs to every job listed for production. The job order system is designed for companies that produce individual products or services.

## Car Barn Management System

This project offers faster transaction on taxi barn in and barn out transaction. Car Barn Management System is designed to automatically compute all drivers' payment for easier operation.

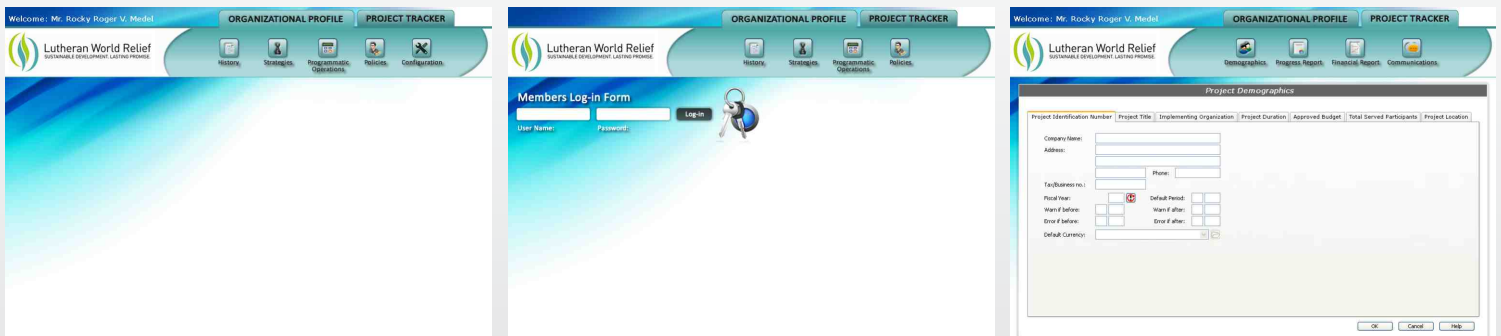

## Distribution Management System

This project is a collection of applications designed to monitor & control the entire distribution network efficiently and reliably.

## Maintenance Management System

This project maintains a computer database of information about an organization's maintenance operations. Maintenance Management System is intended to help maintenance workers do their jobs more effectively and to help management make informed decisions.

## Francisco Bangoy International Airport Daang Maharlika Highway, Buhangin, Davao City

### Flight Information Display System

The Flight Information Display System (FIDS) project, is a software system used to manage and monitor the flight information at the Francisco Bangoy International Airport. This system helps FIDS operators to manage entered flight information, monitor operations, and print reports.

## Digilution Basic Accounting (DBA)

**Digilution Basic Accounting** is a fully integrated, network-ready, multi-company accounting system which includes Accounts Payable, Accounts Receivable, and General Ledger modules. Digilution Basic Accounting answers all your business' record-keeping requirements. It has a simple interface easy enough for any user to learn, yet it is powerful enough to satisfy your accounting needs.

## Digilution Basic Accounting Lite (DBA Lite)

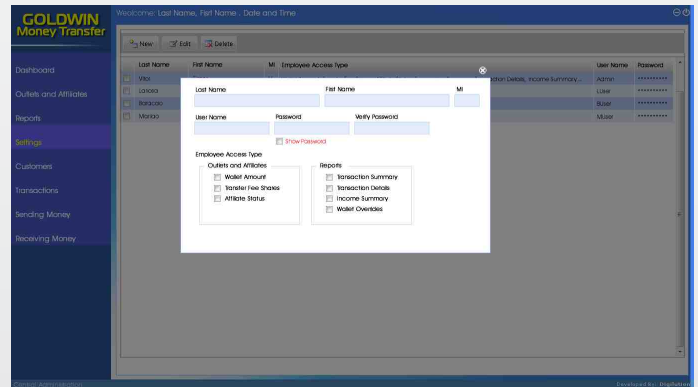

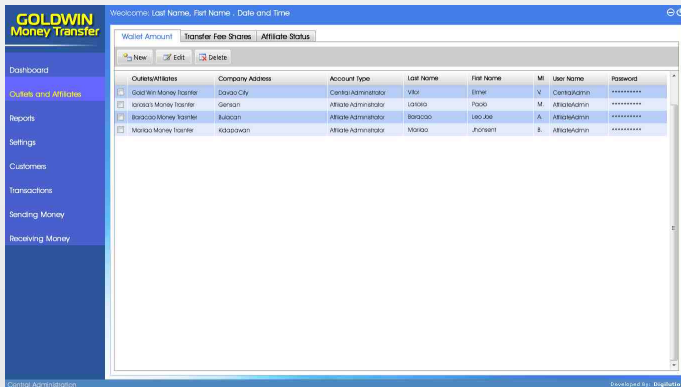

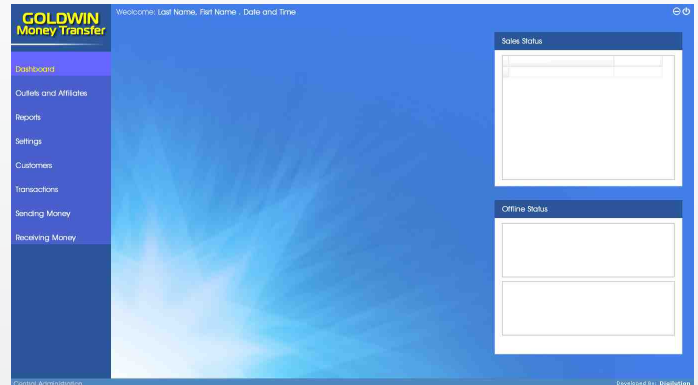

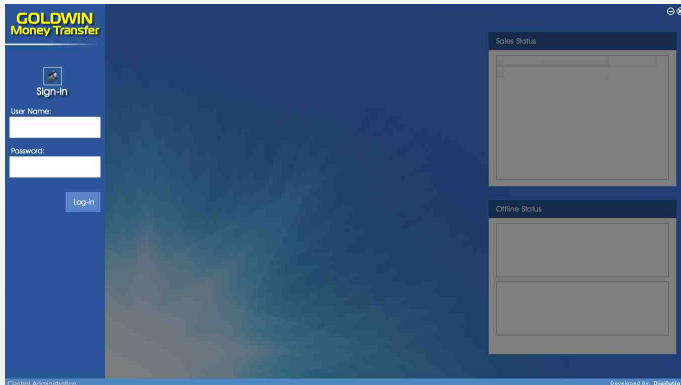

**Digilution Basic Accounting Lite** is a trimmed-down version of DBA. Its very simple functionality is perfect for businesses who don't want the complexities of in-depth accounting. DBA Lite includes Income and Expenses modules. DBA Lite can tell you where your business stands through simple income-minus-expenses calculations.

## Smart Info Board System

This project is an interactive system that lets the members or clients interact with each other through a platform. An Info Board system is one of the easiest and convenient ways to broadcast real time downloadable information.

## Money Transfer Management System

This project is a system that accepts move the money fast to anyone within the Philippines. This system can also generate transaction reports per branch.

## Billing System

This project is a system that invoices and tracks orders of customers. This system is designed to handle computing charges to providing statements.
